BEFORE THE UNITED STATES COPYRIGHT OFFICE

RESPONSE OF THE LIBRARY COPYRIGHT ALLIANCE TO REQUEST FOR COMMENTS ON SOVEREIGN IMMUNITY

The Library Copyright Alliance (“LCA”) welcomes the opportunity to provide comments in response to the Copyright Office’s notice of inquiry concerning sovereign immunity published in the Federal Register on June 3, 2020. Many of the libraries represented by LCA are run by state governments, including libraries at state colleges and universities, as well as state libraries. The Supreme Court’s decision in Allen v. Cooper confirmed twenty years of lower court decisions holding the Copyright Remedy Clarification Act to be unconstitutional.1 Even though state-run libraries have understood that they are immune from damages liability for copyright infringement, they have not exploited this immunity to run roughshod over copyright. Accordingly, at least with respect to libraries, there has not been the sort of constitutional harm required by Allen to abrogate sovereign immunity.

2. To what extent does state sovereign immunity affect the licensing or sale of copies of copyrighted works to state entities? For example: a. Do copyright owners provide different payment or licensing terms in transactions with state entities than are provided in transactions with other parties? b. Have copyright owners changed aspects of their sales or licensing practices as a result of state sovereign immunity? c. Do different states or state entities take different approaches to working with copyrighted material? Are there particular states that more frequently infringe?

---

Over the past twenty years, state-run libraries have spent an estimated thirty billion dollars purchasing copyrighted works.\(^2\) This demonstrates conclusively that sovereign immunity has not adversely affected the sale or license of copyrighted works to state entities. We are not aware of copyright owners providing different terms to state-run libraries due to sovereign immunity. To the extent that copyright owners provide different terms to state-run libraries, this likely is because of the scale of the transactions. State university systems have far more students and faculty than private universities, so are able to negotiate volume discounts and other customized terms.

3. What remedies are available for copyright owners when states infringe their works? a. To what extent did copyright owners file suits under the Copyright Act against state entities prior to the Supreme Court’s decision in *Allen v. Cooper*? b. In your opinion, does the availability of injunctive relief against state officials provide an adequate remedy to address the needs of copyright owners in response to instances of state copyright infringement?

The adjudicated disputes between state-run libraries and copyright holders involve complex issues concerning the application of the Copyright Act of 1976 to digital technologies, not flagrant acts of piracy. These pre-*Allen* cases demonstrate that copyright holders have a means of vindicating their rights against state actors under *Ex Parte Young*, 208 U.S. 129 (1908).

In *Authors Guild, Inc. v. HathiTrust*, 755 F.3d 87 (2d Cir. 2014), the Authors Guild sued HathiTrust, a consortium of research universities that operated a digital repository. The Authors Guild also named as defendants a HathiTrust member not entitled to sovereign immunity (Cornell University) and the presidents of four state-run HathiTrust members (University of Michigan, University of California, University of Wisconsin, and Indiana University). The HathiTrust Digital Library (“HDL”) contains electronic copies of more than ten million books in HathiTrust members’ collections digitized by Google in the course of the Google Books Project.\(^3\)

---

\(^3\) HDL created and maintained four copies of its entire database (one on the primary server at the University of Michigan, another at the mirror server at the Indiana University, and two encrypted back up tapes at two secure locations on the University of Michigan campus). 755 F.3d at 92. The copy of each work contains the
The Authors Guild sued for declaratory judgment and injunctive relief. Both the district court and the Second Circuit found that the copies made by HathiTrust were permitted by the fair use right, 17 U.S.C. § 107.

Notwithstanding state sovereign immunity, the Authors Guild was able to have a federal court adjudicate a copyright infringement claim based on the actions of four state-run universities. If it had prevailed on the merits, the Authors Guild would have succeeded in shutting HDL down. Its interests would have been completely vindicated.

In ongoing litigation, three academic publishers are challenging the electronic course reserve system managed by the library at Georgia State University (“GSU”), which allows students to access sections of books that instructors place on reserve as supplemental reading. The named defendants are members of the GSU Board of Regents and GSU officials. After the publishers filed their complaint, GSU adopted a more rigorous fair use policy that would govern its electronic reserve system. Not satisfied with the new policy, the publishers continued their litigation. The district court conducted a bench trial with respect to 74 claimed infringements that occurred after GSU’s adoption of its new fair use policy. The district court found that publishers failed to establish a prima facie case of infringement in 26 instances, that fair use applied in 43 instances, and that GSU infringed copyright in five instances. Cambridge Univ. Press v. Becker, 863 F.Supp.2d 1190 (N.D. Ga. 2012), aff’d in part, rev’d in part, Cambridge Univ. Press v. Patton, 769 F.3d 1232 (11th Cir. 2014).

The publishers appealed again, and once more the Eleventh Circuit found errors in the district court’s fair use analysis. Cambridge Univ. Press v. Albert, 906 F.3d 1290 (11th Cir. 2018). In the second remand, the district court on March 2, 2020, found that fair use permitted 38 of the 48 claimed infringements. Motions for attorney fees are now pending before the district court.

full text of the work in machine readable format, as well as images of each page of the work as they appear in the print version. Thus, HDL holds eight permanent copies of each work. Id. In addition to preserving the books in the repository, HDL enables full-text search of the books and provides full text access to people with print disabilities.
The GSU litigation demonstrates once again that notwithstanding state sovereign immunity, copyright holders are able to pursue copyright infringement actions against a state actor. The mere filing of a lawsuit caused GSU to adopt a new fair use policy. The district court found three times that under the new policy, GSU infringed the copyright in some of the publishers’ works.\(^4\)

Additionally, state-run libraries are large, professionally-run organizations with established rules and procedures. Like other state-entities, these libraries seek to avoid the adverse publicity and significant cost of copyright litigation. For these reasons, the availability of injunctive relief against state officials provide an adequate remedy to address the needs of copyright owners in response to instances of state copyright infringement.

c. To what extent are there state law causes of action that may provide a remedy for copyright infringements by state entities? Are there state court cases in which a copyright owner has been awarded a judgment on such a claim? d. To the extent state law provides a cause of action relevant to copyright infringement, how do the elements of the cause of action and/or available remedies differ from those applicable to claims under the Copyright Act? e. In your opinion, are those remedies adequate to address the needs of copyright owners in response to instances of state copyright infringement?

An increasing percentage of library acquisition budgets are devoted to electronic licenses of content rather than purchases of monographs and print issues of serials. Currently, approximately two-thirds of the acquisition budget of public academic libraries is devoted to licensed electronic resources.\(^5\) If a library violates the terms of the license, the copyright owner can sue the library under state law for breach of contract. The licenses often contain access and use restrictions, and thus approximate the bundle of rights provided by copyright.\(^6\) These contract remedies are adequate to address the needs of copyright owners.

7. Please identify any pertinent issues not referenced above that the Copyright Office should consider in conducting its study.

---

\(^4\) In Ass’n for Info. Media & Equip. v. Regents of the Univ. of Cal., No. CV 10-9378 CBM (MANx) (C.D. Cal. 2011), the district court dismissed the complaint in part on sovereign immunity grounds, but noted that “Plaintiffs are not precluded from asserting their claim for injunctive relief or their claim for damages against Defendants in their individual capacities.” The court also found that fair use permitted the claimed infringement: UCLA Library’s uploading of a DVD of “The Plays of William Shakespeare” to its server so that it could be streamed to UCLA faculty and students.

\(^6\) The enforceability of contract terms inconsistent with copyright exceptions is an issue not within the scope of this notice of inquiry.
The elimination of sovereign immunity with respect to copyright claims would have a negative impact on the digital preservation activities of state-run collecting institutions. Digital technology offers libraries an unprecedented ability to preserve the valuable works in their collections. These digital preservation activities implicate the Copyright Act’s reproduction and distribution rights, forcing libraries to rely upon the fair use right, 17 U.S.C. § 107, in order to engage in the preservation activities. However, the precise boundaries of the preservation activities permitted by fair use are not certain. Sovereign immunity currently allows state-run libraries and archives to manage this uncertainty by limiting their exposure to damages liability. The elimination of sovereign immunity would expose these collecting institutions to significant damages liability, potentially resulting in a dramatic decrease in digital preservation activity. This is so even if the abrogation applies only to intentional or reckless infringements. Plaintiffs seeking a payday would be incentivized to pursue libraries engaged in mass-preservation projects.
